1. Introduction

1.1 Contextual Background

The Social Immersion Programme (SIP) is a cornerstone of the PGDM Marketing curriculum at JAGSoM, designed to foster empathy, social responsibility, and the practical application of management principles in the non-profit sector. For this immersion, I was part of Group 10, assigned to work with the **Prime Educational and Social Trust** in Puducherry.

Prime Trust is a non-governmental organization dedicated to the empowerment of marginalized communities, particularly women and children. One of its flagship initiatives is the **Janani Home for Girls**, a shelter and educational hub that provides a safe environment for young girls to grow and thrive. During our ten-day engagement from April 10th to April 18th, 2026, our group worked closely with the administrative staff and the children to identify operational gaps and implement digital solutions that could enhance the organization's visibility and fundraising capabilities.

The context of our intervention was set against a backdrop of post-pandemic recovery, where many grassroots NGOs found themselves struggling to maintain traditional fundraising streams. Prime Trust, despite its significant impact on the ground through projects like the Akshaya Tailoring Centre and various evening schools, faced a challenge in translating its physical success into a compelling digital narrative. Our objective was to leverage our marketing expertise to bridge this gap, ensuring that the NGO's mission reached a global audience of potential donors and volunteers.

1.2 What Touched Me the Most

The immersion at Janani Home was more than just a project; it was a profound personal experience. What touched me most was the sheer resilience and joy exhibited by the girls despite the challenges they had faced. There was a specific moment during our session on "Good Touch and Bad Touch" awareness that left a lasting impact. Seeing the children engage with such sensitive topics with curiosity and a sense of empowerment reinforced the importance of the work Prime Trust does.

Moreover, the dedication of the staff at the Akshaya Tailoring Centre was deeply moving. Witnessing women from marginalized backgrounds learn skills to build sustainable livelihoods taught me the true meaning of empowerment. It wasn't just about charity; it was about dignity and self-reliance. This experience shifted my perspective from seeing marketing as a tool for commercial gain to seeing it as a powerful instrument for social advocacy. The realization that our

digital strategies—something we often take for granted—could be the difference between a child receiving a scholarship or a school having a roof, provided a deep sense of purpose to our every action.

2. Problem Framing

2.1 Broader Description of the Problem

The non-profit sector in India, particularly at the grassroots level, often suffers from a "Digital Divide." While larger international NGOs have the resources to employ dedicated digital marketing and fundraising teams, local organizations like Prime Trust rely on a handful of overworked staff members who manage everything from field operations to administrative reporting.

The broader problem is the **invisibility of impact**. When an organization's great work is not documented or communicated effectively, it fails to attract the necessary resources—funding, volunteers, and corporate partnerships—to scale. This creates a cycle where the organization is constantly in "survival mode," unable to invest in the very technology that could save them time and increase their efficiency.

2.2 Situation Analysis

Upon our arrival, we conducted a thorough audit of the NGO's current operations. We observed that:

- **Fundraising Platforms:** Although Prime Trust had 10 projects listed on GlobalGiving, the pages were static and lacked regular updates, leading to low international donor conversion.
- **Social Media Presence:** Their Instagram and Facebook handles were underutilized. Content was irregular and didn't follow a cohesive brand story, missing the opportunity to engage a younger, digitally active demographic.
- **Data Management:** Much of the student data for the evening schools was managed through manual processes or fragmented spreadsheets, making it difficult to generate impact reports for CSR audits.
- **Corporate Outreach:** There was no standardized process for identifying or contacting CSR departments of companies in the Puducherry and Tamil Nadu region.

2.3 Problem Definition

Based on our analysis, we defined the problem through a 4-pronged approach to ensure a holistic solution:

1. **Prong 1: Fragmented Digital Presence** – Lack of a structured social media and digital fundraising strategy prevented the NGO from reaching global donors and maintaining volunteer interest.
2. **Prong 2: Operational Data Silos** – The absence of organized, automated data management systems for student records and donor tracking created significant administrative overhead and reduced transparency.
3. **Prong 3: Non-Standardized CSR Outreach** – The lack of a professional Standard Operating Procedure (SOP) for corporate outreach meant that fundraising efforts were reactive and inconsistent rather than strategic and proactive.
4. **Prong 4: Knowledge Perishability** – Technical skills brought in by temporary interns often left the organization once the internship ended, creating a recurring "skill vacuum" and preventing long-term digital growth.

3. Project Execution

3.1 Identification of Solution Alternatives

To address the defined problems, we brainstormed several alternatives, keeping in mind the resource constraints of the NGO:

- **Alternative 1: Direct Content Management** – We could have simply managed their accounts for 10 days, posting daily. However, this would have solved the problem only temporarily.
- **Alternative 2: Professional Content Production** – Hiring a professional agency was economically unviable for the Trust.
- **Alternative 3 (Proposed): Sustainable Capacity Building** – This involved creating long-term assets: a social media handbook, CSR proposal templates, automated Excel dashboards, and **transferable video tutorials**. This solution focuses on making the organization self-sufficient.

3.2 Evaluation of the Alternatives through TEV Analysis

Following the college-prescribed format, we conducted a detailed Techno-Economic Viability analysis for our proposed solutions.

Solution (i): Sustainable Capacity Building (Tutorial Videos & AI Integration)

Technical Feasibility:

- **Suitable Technology:** We utilized Microsoft Excel, PowerPoint, and Canva—tools already available on the NGO's office computers. No new hardware was required.
- **Human Resources:** The staff showed high motivation levels and a strong inclination to learn AI and digital tools during our training sessions.
- **Process:** We recorded 10+ tutorial videos that simplify complex tasks like data entry and poster designing, ensuring knowledge transfer.

Economic Viability:

- **Self-Sustainability:** High. Once the tutorials are created, they serve as a permanent training resource for future staff/volunteers at zero recurring cost.
- **CapEx/OpEx:** Capital expenditure was zero. Operating expenses are reduced as staff can now perform tasks in-house that might have required external help.

Solution (ii): CSR Outreach SOP & Corporate Proposals

Technical Feasibility:

- **Communication:** Leverages existing email infrastructure. We created professional templates and a database of CSR contacts in Puducherry and Tamil Nadu.
- **Legal Requirements:** Proposals were structured to align with Section 135 of the Companies Act, making them attractive for corporate CSR audits.

Economic Viability:

- **Revenue Generation:** Direct potential for revenue through CSR funding. The ROI of the time spent drafting these proposals is exponential if even one corporate partnership is secured.

Solution (iii): Instagram Content Strategy & Social Media Handbook

Technical Feasibility:

- **Community Needs:** The strategy focuses on storytelling, which resonates with the community and donors.
- **Technology:** Easy-to-use Canva templates were designed so staff can update them without graphic design skills.

Economic Viability:

- **Sustainability:** By scheduling posts using free tools, the NGO can maintain a digital presence without spending on advertising.

Techno-Economic Viability (TEV) analysis
Prime Trust — Social Immersion Programme 2026 · Group 10 · JAGSoM

SOLUTION SCORING

SOLUTION 01 Sustainable capacity building (Tutorial videos & AI integration) ✓ Proposed TECHNICAL FEASIBILITY 90% ECONOMIC VIABILITY 95% ✓ Uses existing tools — Excel, Canva, PowerPoint ✓ Zero capital expenditure required ✓ 10+ video tutorials; permanent training resource ✓ AI tools (ChatGPT, Perplexity) as force multiplier ✓ Self-sustaining at zero recurring cost ⚠ Requires staff motivation to adopt	SOLUTION 02 CSR outreach SOP (Corporate proposals & contact DB) ✓ Proposed TECHNICAL FEASIBILITY 85% ECONOMIC VIABILITY 88% ✓ Leverages existing email infrastructure ✓ Aligned with Companies Act §135 for CSR audit ✓ DB of CSR contacts — Puducherry & Tamil Nadu ✓ Exponential ROI if one partnership secured ⚠ Reactive follow-ups required monthly ⚠ Conversion timeline is uncertain	SOLUTION 03 Instagram content strategy (Social media handbook & Canva templates) ✓ Proposed TECHNICAL FEASIBILITY 88% ECONOMIC VIABILITY 80% ✓ Canva templates — no design skills needed ✓ Storytelling focus resonates with donors ✓ Free scheduling tools maintain presence ✓ Targets younger, digitally-active demographic ⚠ Consistent posting discipline required ⚠ Results are indirect; harder to quantify
--	--	--

OVERALL TEV SCORES

SOLUTION 01 92/100 Highly viable	SOLUTION 02 87/100 Highly viable	SOLUTION 03 84/100 Viable
---	---	--

COMPARATIVE EVALUATION MATRIX

Evaluation criterion	Sol. 01 — Capacity building	Sol. 02 — CSR outreach	Sol. 03 — Social media
Technology required	Existing	Existing	Free tools
Capital expenditure	₹0	₹0	₹0
Long-term sustainability	Very high	Medium	Medium
Revenue potential	Indirect	Direct	Indirect
Human resource demand	Low (post-setup)	Medium	Medium
Addresses knowledge vacuum	Yes — core focus	No	Partially
Implementation time	10 days	10 days	10 days

RECOMMENDATION

All three solutions were bundled as the **Prime Trust Digital Empowerment Suite**. Solution 01 scored highest (92/100) due to zero cost, permanent impact, and tackling the “knowledge perishability” gap — the root cause of recurring digital decline. Solutions 02 and 03 complement it by addressing revenue generation and brand visibility respectively. The integrated approach maximises TEV while staying fully within the NGO’s resource constraints.

3.3 Proposed Solution with Rationale

The final proposed solution was the "**Prime Trust Digital Empowerment Suite.**" This comprehensive package included:

- A repository of **Skill Tutorial Videos** covering Excel (for data management), PowerPoint (for donor presentations), and Canva (for social media).
- An **AI Usage Guide** for NGOs, teaching staff how to use tools like Perplexity and ChatGPT to draft reports, newsletters, and email responses efficiently.
- A **CSR Outreach Toolkit** with standardized email drafts and proposal formats for all 10 major projects of the Trust.

Rationale: The primary goal was **Sustainability**. In marketing, the greatest value we can provide to a resource-strapped partner is the ability to maintain their own momentum. By focusing on "Knowledge Transfer" rather than "Service Delivery," we ensured that Prime Trust would not face a digital decline once we left. The use of AI effectively acts as a force multiplier, allowing a small team to achieve the output of a much larger marketing department.

3.4 Blog Post on LinkedIn

Reflecting on my SIP Journey: From Classrooms to Community Impact

My 10-day Social Immersion Programme in Puducherry with Prime Trust has been a transformative chapter of my MBA. Working at Janani Home for Girls, I realized that marketing is not just about metrics—it's about people.

Our team (Group 10) focused on digitizing the NGO's operations. We didn't just 'do the work'— we empowered the staff. From teaching AI tools to save administrative time to creating a library of video tutorials for Excel and Canva, we aimed for a legacy of self-reliance.

The most rewarding part? Seeing the curiosity in the eyes of the staff and the smiles of the children. I've learned that a well-placed data formula or a compelling Instagram story can genuinely change lives. Thank you, JAGSoM and Prime Trust, for this opportunity to blend marketing skills with social empathy.

#SocialImpact #MBAJourney #JAGSoM #SIP2026 #DigitalEmpowerment #PrimeTrust

4. Conclusion

4.1 Recommendation

Moving forward, I recommend that Prime Trust:

- **Adopt a Digital-First Mindset:** Integrate the AI and Excel tools provided into the daily workflow of the office staff.
- **Maintain the Content Calendar:** Use the Instagram Handbook to post consistently, focusing on "Impact Stories" rather than just "Event Photos."
- **Regular CSR Follow-ups:** Use the CSR SOP to send monthly newsletters to corporate contacts, maintaining the relationship even outside of funding cycles.
- **Ongoing Training:** Encourage new volunteers to watch the skill tutorial videos as part of their onboarding process.

4.2 Limitations

While our intervention was successful, we noted a few limitations:

- **Technical Backend Access:** We were unable to directly modify the backend of the main website due to administrative credentials being held by an external developer.
- **Time Constraints:** A 10-day period is sufficient to initiate change, but long-term monitoring is required to ensure the habits stick.
- **Hardware Gaps:** While the software is free, the NGO could benefit from more modern hardware (faster PCs/Tablets) to run multiple AI and design tools simultaneously.

5. Appendices & Field Reports Summary

Below is a summarized log of our 10-day immersion activity at Prime Trust:

Day	Date	Key Activities
1	10-04-2026	NGO Orientation, Visit to Janani Home, Initial Audit of Digital Assets.
2	11-04-2026	GlobalGiving Research, Instagram Audit, Data Management discussion.
3	12-04-2026	GK Quiz for children, Data entry for food sponsorship, Instagram strategy planning.
4	13-04-2026	Visit to Akshaya Tailoring Centre, CSR Proposal drafting for 10 projects.
5	14-04-2026	CSR Contact Identification, Student Data Spreadsheet automation (Evening School).
6	15-04-2026	Cold emailing corporates, Volunteer outreach planning, Staff training on Excel.
7	16-04-2026	College outreach for volunteers, Sustainability strategy development, Recording Excel Tutorials.
8	17-04-2026	AI Knowledge Sharing Session, PPT creation on AI Tools for NGOs, Social Media Handbook finalization.
9	18-04-2026	Excel Formatting Training, Handing over tutorial videos & handbook, "Good Touch/Bad Touch" awareness session.
10	-	Final Reflection, Farewell at Janani Home, Letter of Appreciation received.
