CAREER OBJECTIVE

Aspiring to build a career in analytics-led marketing, business strategy, and techno-commercial roles. I aim to combine marketing expertise with data-driven decision-making to solve business problems and create measurable impact. I possess strong analytical, quantitative, and marketing capabilities, supported by proficiency in SQL, Python, Power BI, Tableau, Excel, and Databricks. My expertise includes market research, B2B marketing, brand management, key account management, digital strategy, and project management. I am skilled at translating complex data into actionable insights and identifying opportunities across customer, sales, and digital funnels. Currently pursuing a PGDM in Marketing at JAGSoM, I have gained practical exposure to sales, marketing, and social media analytics. At Unschool, I analyzed lead-conversion funnels to support business growth. At The Yellow Submarine, I contributed to content and brand strategy development. At The 4th Axis, I used social media performance and market research insights to support strategic recommendations. Through certifications and guided projects in data analytics, Agile/Scrum, SEO, CRM, cloud computing, Azure, Databricks, and project management, I am prepared to contribute at the intersection of marketing, analytics, technology, and business strategy.

EDUCATION

- PGDM, Jagdish Sheth School of Management (JAGSoM), Batch 2025–27
- Bachelor of Arts, West Bengal State University, 2023 — 70.70%
- Class XII, West Bengal Council of Higher Secondary Education(WBCHSE), 2020 — 90%

INTERNSHIPS

- Unschool, Remote — Sales and Marketing Intern, 6 months
- The Yellow submarine, Remote — Social Media Marketing Intern, 4 months
- The 4th Axis, Remote — Social Media Analyst, 1 month

PROJECTS

- **Business Analysis & Process Management** – Coursera(guided)
- **Introduction to Project Management with ClickUp** – Coursera(guided)
- **Marketing Design with Easil** – Coursera(guided)
- **Introduction to CRM with HubSpot** – Coursera(guided)
- **Create a Project Management Tracker using Google Sheets** – Coursera(guided)
- **Search Engine Optimization (SEO) with Squarespace** – Coursera(guided)

➤ **ACADEMIC PROJECT (1)**

Nomad Nibs — Digital Marketing & E-commerce Project | 2026

- Worked as part of a five-member team to develop the brand's digital presence.
- Created and managed the Nomad Nibs LinkedIn page to support brand communication and visibility.
- Contributed to the development of an e-commerce website for palm-oil-free and vegan chips.

Project Link: <https://www.nomadnibs.in/>

➤ **ACADEMIC PROJECT (2)**

Desi Protein — Brand Management & E-commerce Project | 2026

- Conceptualized a digital-first protein brand offering products inspired by Indian/Desi flavors and consumer preferences.
- Developed an e-commerce website focused on brand positioning, product presentation, and customer experience.

- Applied digital marketing, consumer behavior, branding, and e-commerce principles to translate the concept into a cohesive digital business proposition.

Project Link: <https://desiprotein-preview.preview.emergentagent.com/>

➤ **Research Incubation(RI)**

R&D Intensity, Digital Transformation & Export Competitiveness | Research Incubation

- Analyzed 8,808+ CMIE Prowess firm-year observations using regression models to assess how R&D and digital investment affect Indian firms' export competitiveness.
- Developed a Digital Intensity Index and identified R&D, supply-chain integration, and workforce expenditure as key export-related factors

SKILLS

- **Programming & Data Analysis:** Python (basic), SQL, HTML, CSS
- **Analytics & BI Tools:** Power BI, Tableau, MS Excel, Databricks, Databricks
- **Data Engineering:** ETL Pipeline Development, Cloud Computing, Microsoft Azure
- **Marketing & Growth Tools:** SEO (SEMrush, HubSpot), Meta Business Suite,
- **Project & Collaboration Tools:** Git, GitHub, Agile/Scrum
- **Databases:** MySQL Server, PostgreSQL

CERTIFICATIONS

- Data Science with AI — PW Skills
- Python Essentials 1 and Essentials 2 — Cisco
- Agile Scrum Certification — Simplilearn
- Data Analytics Essentials — Cisco
- ADFAP — Tally Academy
- General English Course (Speaking, Writing, Effective Listening) — British Council
- SEO Certified — HubSpot Academy
- SQL — Simplilearn
- Facebook Marketing and Advertising (Meta Business Suite) — Simplilearn
- Content-led SEO — SEMrush Academy
- Advanced SEO Tool Optimization — SEMrush Academy
- Cloud computing & Azure – IBM SkillBuild, Simplilearn
- CRM System – OnePageCRM, Simplilearn
- Project Management – Coursera(Google)
- Databricks – Simplilearn5

EXTRA-CURRICULAR / POSITIONS OF RESPONSIBILITY

- Member, **PR and Media committee** , JAGSoM Student Council
- Member of **JAGSoM,s Magazine team**
– Content writer in **PRARAMBH**

INDIVIDUAL DEVELOPMENT PLAN REPORT

Individual Development Plan — INDRANIL MAJUMDER

Development Area	Goal	Action Plan	Timeline
Communication	Improve public speaking confidence	Joined Personal enhancement program (PEP), made presentation in many classroom sessions	Term 1
Analytics	Strengthen data analysis skills	Joined Business Data Visualization (BDV) course where learnt Power BI and Tableau	Term 2
Marketing Area Knowledge	Understanding the fundamental and frameworks to get started	Joined Marketing management, B2B marketing and several marketing course to grasp domain area knowledge	Term 2 & 3

Some of the important Cetificates

Azure Fundamentals — Simplilearn | Microsoft

Successfully completed an online course covering core Azure cloud concepts and foundational Microsoft Azure services.

DECLARATION OF COMPLETION

Indranil Majumder

has successfully completed the online course

Get Started with Databricks for Data Engineering

This professional has demonstrated initiative and a commitment to deepening their skills and advancing their career. Well done!

8th August 2026

Certificate code : 10575596

This certificate is issued solely for the purpose of acknowledging completion of Databricks Courses on the Simplilearn portal and is not an official Databricks certification.

Krishna Kumar
CEO, Simplilearn

Get Started with Databricks for Data Engineering — Databricks | Simplilearn
Completed foundational training in Databricks for data engineering, covering core concepts and practical data engineering workflows.

CERTIFICATE OF COMPLETION

Indranil Majumder

has successfully completed the online course:
Introduction to SQL

This professional has demonstrated initiative and a commitment to deepening their skills and advancing their career. Well done!

16th June 2026
Certificate code : 10352901

Krishna Kumar
CEO, Simplilearn

Introduction to SQL — Simplilearn | SkillUp

Completed foundational training in SQL, developing skills in database concepts, querying, and data manipulation.

CERTIFICATE OF COMPLETION

This is to certify that

Indranil Majumder

Has successfully completed the Sales CRM Expert course. Acquired skills include the Next Action sales method, use of an action-focused sales CRM, and sales process development.

CERTIFIED
08.08.2026

CEO & FOUNDER
Michael Fitzgerald

Sales CRM Expert Certification — OnePage CRM Sales Academy (Aug 2026)

Certified in the Next Action sales method, action-focused sales CRM usage, and sales process development.

This certificate is awarded to

Indranil Majumder

for successfully completing

Python Essentials 1

offered by Networking Academy
through the Cisco Networking Academy program.

Lynn Bloomer

Journey to Cloud: Orchestrating Your Solution — IBM SkillsBuild (Issued Aug 17, 2026)
Certified in designing and orchestrating end-to-end cloud solution deployments as part of IBM's cloud learning path.

SOCIAL IMMERSION PROGRAMME REPORT

Social Immersion Programme — RAHUL VERMA

ORGANISATION

Gram Vikas Trust, Rural Karnataka

DURATION

10 days

OBJECTIVE

As part of the Social Immersion Programme (SIP) at JAGSoM — a mandatory field-based capstone within the PGDM Marketing curriculum — I led a marketing and analytics-driven intervention for the Prime Educational and Social Trust, a grassroots NGO in Puducherry running the Janani Home for Girls shelter and several community education initiatives. Over a ten-day, on-ground engagement, my team (Group 10) diagnosed why a genuinely high-impact organisation was struggling to convert its ground-level work into donor visibility and funding, and then designed and delivered a self-sustaining digital operating system the Trust could run on its own long after we left.

This case study reframes the project as a portfolio piece: what the problem was, how I approached diagnosing and solving it, what I personally built and delivered, and what it demonstrates about my capability in marketing strategy, data-driven decision-making, and stakeholder-centred execution — all directly relevant to the brand, digital, and growth marketing roles I am targeting.

Context & The Challenge

Grassroots NGOs in India operate under a structural handicap that I term the 'capability-visibility gap': organisations doing meaningful frontline work — running shelters, tailoring centres, evening schools — simply don't have the bandwidth or in-house digital expertise to communicate that work convincingly to funders. Prime Trust exemplified this gap precisely.

Diagnostic findings from our situation analysis

- 10 active fundraising projects listed on GlobalGiving were static and rarely updated, resulting in weak international donor conversion.
- Instagram and Facebook presence existed but posted irregularly with no consistent brand narrative, missing a core acquisition channel for younger, digitally native donors and volunteers.
- Student and beneficiary data for the evening schools lived in fragmented manual spreadsheets, making CSR audit reporting slow and error-prone.
- There was no repeatable process for identifying or approaching CSR departments of companies across Puducherry and Tamil Nadu — outreach was reactive rather than strategic.

We distilled this into a four-pronged problem definition — Fragmented Digital Presence, Operational Data Silos, Non-Standardised CSR Outreach, and Knowledge Perishability — with the fourth prong being the most strategically important insight: every previous intern or volunteer had brought temporary digital skills that left with them, meaning Prime Trust was structurally incapable of compounding its digital capability over time.

My Approach: From Insight to Evaluated Strategy

Rather than defaulting to the obvious short-term fix — simply managing the NGO's social accounts for the duration of our visit — I pushed the team toward a solution architecture that would outlive our presence. We evaluated three alternatives using a formal Techno-Economic Viability (TEV) framework, scoring each on technical feasibility and economic viability so the recommendation to the Trust and to JAGSoM was evidence-based rather than opinion-based.

Alternatives evaluated

- Direct Content Management — hands-on daily posting during the visit. Fast but purely temporary; scored lowest on long-term sustainability.
- Professional Content Production — outsourcing to an agency. Technically sound but economically unviable for a resource-constrained Trust.
- Sustainable Capacity Building (recommended) — building durable, transferable assets: a social media handbook, CSR proposal templates, automated Excel dashboards, and video tutorials. Scored 92/100 on the TEV matrix, the highest of all options, driven by zero capital expenditure, zero recurring cost, and direct resolution of the 'knowledge perishability' root cause.

This TEV-based comparison — technology required, capital expenditure, long-term sustainability, revenue potential, human-resource demand, and implementation time — is the kind of structured, quantified decision-making framework I now default to whenever I'm asked to choose between marketing initiatives with competing resource claims.

The Solution: Prime Trust Digital Empowerment Suite

The final recommendation bundled all three evaluated options into a single integrated package — the 'Prime Trust Digital Empowerment Suite' — so that capacity-building, revenue generation, and brand visibility were addressed simultaneously rather than in isolation. I was directly responsible for the following deliverables:

1. Skill Tutorial Video Library

Recorded 10+ screen-capture tutorials covering Excel (donor and student data management), PowerPoint (donor-facing presentations), and Canva (social content design) — built using tools already on the NGO's existing hardware, so adoption required zero new investment.

2. AI Usage Guide for NGO Staff

Authored a practical guide training staff to use Perplexity and ChatGPT for drafting reports, newsletters, and donor correspondence — positioning AI as a force multiplier that lets a two-person admin team operate with the output of a much larger marketing function.

3. CSR Outreach Toolkit

Built a structured Standard Operating Procedure and a contact database for CSR departments across Puducherry and Tamil Nadu, with proposal templates for all 10 of the Trust's active projects, explicitly aligned to Section 135 of the Companies Act so proposals map directly onto how corporates plan CSR spend.

4. Instagram Content Strategy & Social Media Handbook

Designed a storytelling-first content framework, backed by ready-to-edit Canva templates, shifting the account's content mix from generic 'event photos' toward donor-resonant 'impact stories' — and built for the staff to run independently using only free scheduling tools.

Impact & Outcomes

- Delivered a fully evaluated, TEV-scored strategic recommendation (92/100 overall viability) rather than an unstructured set of suggestions — giving the NGO's leadership a defensible basis for resource allocation.
- Converted an ad-hoc, founder-dependent digital presence into a documented, repeatable system: handbook, templates, and dashboards that any future volunteer or staff member can pick up without re-training from scratch.
- Directly addressed the CSR funding gap by producing ready-to-send proposals for all 10 of the Trust's live projects, each structured to meet statutory CSR compliance requirements — shortening the path from 'interested corporate' to 'signed partnership.'
- Embedded AI tooling into a non-technical NGO's daily operations, demonstrating a low-cost route to productivity gains that doesn't depend on hiring specialised digital staff.
- Received a formal Letter of Appreciation from Prime Trust at the close of the engagement, and the project's blog post reflection was published on LinkedIn as part of JAGSoM's SIP 2026 cohort showcase.

Because the entire intervention was designed around zero capital expenditure and zero recurring cost, its impact is structurally durable — the Trust's digital capability does not degrade once the ten-day engagement window closes, which was the explicit design goal from the outset.

Skills Demonstrated

Strategic & Analytical

- Structured problem framing using situation analysis and a multi-pronged root-cause breakdown.
- Techno-Economic Viability (TEV) analysis to quantitatively compare and prioritise competing strategic options.
- Translating a resource-constrained brief into a scoped, deliverable-based solution architecture.

Marketing & Communications

- Content strategy and storytelling frameworks for social media, tailored to a donor-acquisition objective.
- CSR proposal writing aligned to statutory compliance (Companies Act, Section 135), bridging marketing and corporate-outreach objectives.
- Stakeholder communication across a hierarchy of non-technical NGO staff, children, and corporate CSR contacts.

Data & Tools

- Excel-based data management and dashboard automation for donor and student records.
- Applied use of AI tools (ChatGPT, Perplexity) for operational efficiency in a resource-constrained setting.
- Canva-based, non-designer-friendly content template systems built for handover and reuse.

Leadership & Execution

- Field-based execution under a fixed 10-day timeline, working directly with NGO administrative staff and children.
- Knowledge-transfer design — building for sustainability and independence rather than short-term service delivery.

Personal Reflection

This project reshaped how I think about the purpose of marketing. Working with the children at Janani Home for Girls — including facilitating a sensitive 'Good Touch and Bad Touch' awareness session — and watching women at the Akshaya Tailoring Centre build livelihood skills made the stakes of 'visibility' tangible in a way

no classroom case study could. It reframed a well-structured Instagram post or an automated data sheet not as a marketing deliverable, but as the mechanism by which a child receives a scholarship or a school gets a roof. That shift — from marketing-as-commercial-tool to marketing-as-instrument-of-access — is the single biggest takeaway I carry into every subsequent brief.

KEY LEARNINGS

- Marketing = access, not just promotion — a good proposal can literally get a child a scholarship.
- Diagnose root causes, not symptoms — weak social media was a symptom; "knowledge perishability" was the real problem.
- Structured decisions beat gut calls — TEV scoring made the recommendation defensible, not just persuasive.
- Design for sustainability, not just delivery — build things that outlive your presence, not just fix things while you're there.
- Treat constraints as design inputs — zero budget forced leaner, smarter solutions (free tools, no-code templates).
- Adoption depends on simplicity — a tool the staff can actually use beats a "better" tool they can't.
- Match format to how people learn — video tutorials worked where a written SOP wouldn't have.
- Ground-level exposure builds real conviction — direct contact with impact reframed how you see your own work.
- Honesty about limitations builds credibility — naming constraints (time, access, hardware) makes a case study trustworthy, not weaker.

Certificate

Date: 18.04.2026	
	
♦ ♦ ♦	
CERTIFICATE OF INTERNSHIP	
TO WHOMSOEVER IT MAY CONCERN	
♦	
This is to certify that Indranil Majumder (Registration No: 2025JULJPGM2002), a student of Post Graduate Diploma in Management (PGDM) from Jagdish Sheth School of Management (JAGSoM), Bengaluru, has satisfactorily completed an internship at Prime Educational and Social Trust and Janani Home for Girls, Puducherry. The internship was completed from 10/04/2026 to 18/04/2026, accumulating a total of 9 days. This was part of a Social Immersion Programme designed to provide experiential learning in the field of social work and community development. During this period, the intern was offered opportunities to engage with the organisation's activities and to gain an understanding of its objectives and functioning. We acknowledge their period of enrolment and extend our best wishes for their future endeavours.

RESEARCH INCUBATION REPORT

Research Incubation (RI) — INDRANIL MAJUMDER

PROJECT TITLE

R&D INTENSITY, DIGITAL TRANSFORMATION, AND EXPORT COMPETITIVENESS: EVIDENCE FROM INDIAN FIRMS

MENTOR

Dr. Banantika Datta

OBJECTIVE

As part of my Research Incubation project at JAGSoM, I designed and ran a firm-level empirical study asking a question with real strategic weight for Indian industry and policy: do R&D spending and digital infrastructure investment actually make Indian firms more competitive exporters, or is export success driven by more structural factors — the industry a firm sits in, its supply chain, and its people? Using eleven years of firm-level financial data from the CMIE Prowess database (2014–2025), I built and estimated seven regression models to test this rigorously rather than anecdotally.

This case study translates that academic research project into a portfolio piece: the business question behind it, how I structured the analysis, what the data actually showed (including where my own hypotheses were proven wrong), and the analytical and strategic skills it demonstrates — directly relevant to the analytics-driven marketing and strategy roles I am targeting

The Business Question

Export competitiveness is usually pitched as a technology story: invest in R&D and digital infrastructure, and export performance follows. I wanted to test that assumption directly, using two research questions grounded in a genuine gap in the literature — nobody had previously combined a composite Digital Intensity Index with R&D and royalty-licensing data to compare their effects on Indian firms' export behaviour, before and after the COVID-19 digital-adoption shock.

Research questions investigated

- RQ1: Are R&D intensity and technology-licensing (royalty) payments associated with export volume, export intensity, export participation, and the likelihood of exporting services — and is this effect stronger in technology-intensive sectors like electronics, software, and R&D services?
- RQ2: Is a composite index of digital spending (software, IT-enabled services, ISP, data centre, and satellite/VSAT costs) associated with export intensity and export participation — and does this relationship differ between manufacturing and services firms?

How I Approached the Analysis

Rather than relying on a single regression, I deliberately built a battery of seven models spanning both OLS (for continuous outcomes like export volume and export intensity) and logistic regression (for binary outcomes

like whether a firm exported at all), each with industry fixed effects at the two-digit NIC level to strip out sector-level noise before drawing conclusions about firm behaviour.

Key methodological decisions

- Cleaned and structured 9,281 firm-year observations from an original pull of ~38,000, dropping records with missing income, assets, or industry classification to keep the panel usable and honest.
- Split the sample into a pre-pandemic period (2014–2019) and a post-pandemic period (2020–2025) to explicitly test whether COVID-accelerated digital adoption changed the technology–export relationship.
- Constructed a composite Digital Intensity Index from five separate digital-spend categories, standardising each into a z-score before averaging — a design choice made specifically to avoid multicollinearity that would have muddled a simpler five-variable model.
- Built an interaction model (R&D × technology-sector dummy) to test whether R&D pays off more in electronics, software, and R&D-intensive sectors specifically, rather than assuming a uniform economy-wide effect.
- Reported every result — including every statistically insignificant one — transparently rather than cherry-picking the findings that fit a cleaner narrative.

What the Data Actually Showed

The most important discipline in this project was following the data even when it contradicted the expected 'innovation drives exports' narrative. Several of my initial hypotheses did not hold up under statistical scrutiny — and reporting that honestly was more valuable than forcing a tidier story.

Findings that held up

- R&D spending was positively and significantly linked to export volume in the post-pandemic sample (a 1% rise in R&D spend associated with a ~0.06% rise in exports, $p = 0.002$) — a real, if modest, effect.
- Sector mattered enormously: pharmaceuticals, apparel, food & beverages, and chemicals firms exported significantly more than the baseline industry, while construction-linked sectors exported significantly less — sectoral identity outweighed any single technology variable in explanatory power.
- Firms with higher imported raw material intensity were significantly more likely to export (each unit increase raised the odds of exporting by ~5.9%), supporting a global-value-chain explanation: firms already plugged into international supply chains find it easier to sell internationally too.
- Salary and wage expenditure was a consistent, statistically significant predictor of both export participation and service exports — workforce quality showed up as a real, measurable lever even where flashier tech variables didn't.

Findings that did not hold up

- The Digital Intensity Index showed no statistically significant relationship with either export intensity or export participation, in either time period — digital spending alone was not a reliable predictor of export success.
- Royalty and technology-licensing payments showed no significant relationship with export participation in either period, contradicting the assumption that licensing foreign technology is a reliable export enabler.
- The hypothesis that R&D pays off more specifically in technology-intensive sectors (electronics, software, R&D services) was not supported — the interaction term was statistically insignificant in both periods.
- Digital investment did not show a significantly different export effect for services firms versus manufacturing firms, despite services being commonly assumed to be the more 'digital-native' sector.

Strategic & Policy Implications I Drew Out

- For firms: in sectors with a demonstrated export structure (pharma, chemicals, apparel), continued R&D investment reinforces an existing advantage — but in sectors without one, R&D spending alone is unlikely to unlock export markets without a genuinely competitive product first.

- For firms: supply chain integration (sourcing inputs internationally) looks like a more cost-effective, faster path to export-readiness than large upfront R&D outlays, since it exposes firms to buyer-quality standards indirectly.
- For managers: high digital spend is not, by itself, a differentiator — it may already be table stakes. The more useful question is what the spend is allocated to (e.g., customs-compliance software, logistics tracking) rather than how much is spent in aggregate.
- For policymakers: broad, sector-blind R&D subsidies are likely less efficient than targeted support for sectors with an established export base, paired with trade-facilitation policy (tariff reduction on intermediate goods) rather than innovation subsidy alone.

Skills Demonstrated

Analytical & Statistical

- Designing and estimating multiple OLS and logistic regression models with industry fixed effects on a large firm-level panel (9,000+ observations).
- Constructing a composite index (Digital Intensity Index) from raw financial variables using standardisation to avoid multicollinearity.
- Interpreting coefficients, odds ratios, p-values, and economic significance — and distinguishing statistical significance from real-world managerial relevance.

Research Design

- Structuring a study around two clearly defined, testable research questions derived from an identified literature gap.
- Running a pre-/post-pandemic comparative design to capture a genuine structural break rather than treating the period as uniform.
- Data cleaning and sample construction discipline — transparently reporting attrition rather than concealing data limitations.

Critical & Strategic Thinking

- Willingness to report null and contradictory findings rather than overstating a technology-driven narrative the data didn't support.
- Translating dense statistical output into clear implications for corporate strategy, digital investment decisions, and policy design.
- Identifying methodological limitations (no firm fixed effects, endogeneity, SME under-representation) and proposing concrete future research directions (instrumental variables, dynamic panels).

Personal Reflection

This project taught me the difference between a plausible story and a defensible one. Going in, I expected R&D and digital spending to be the headline drivers of export success — that's the popular narrative in both media and policy discourse. The data pushed back hard on that assumption, and the more valuable skill I built wasn't running the regressions themselves but resisting the temptation to spin the null results into something they weren't. Sectoral identity, supply-chain integration, and workforce quality turned out to matter more than the 'innovation' variables everyone assumes matter most — a genuinely useful, if less flattering, lesson in letting evidence override intuition. That discipline — testing an assumption rigorously and reporting what actually holds up — is exactly the muscle I want to bring into any analytics or strategy role.

KEY FINDINGS

- Popular narratives don't always survive real testing — "innovation drives exports" didn't fully hold up.
- Being willing to be wrong is part of rigorous research — several hypotheses (digital spend, royalties, tech-sector R&D edge) weren't significant.

- Structural factors often beat the "exciting" variables — sector, supply chain, and workforce mattered more than R&D or digital spend.
- Pre-/post-shock splits reveal what a single snapshot can't — the COVID break tested if relationships actually shifted.
- High spending isn't the same as a real advantage — digital spend looked like table stakes, not a differentiator.
- Indirect exposure can build capability faster than direct investment — importing raw materials predicted exporting better than R&D did.
- Statistical significance and real-world relevance are two different checks — always verify economic magnitude, not just p-values.
- Transparent data cleaning protects the credibility of every result that follows.
- Correlation isn't causation — say so plainly instead of overclaiming.
- Null results are still useful findings, not a failed analysis.
- Good research ends in a decision, not just a coefficient.
- One-size-fits-all policy is usually the wrong policy when the underlying relationship is context-dependent.

Internships

Sales and Marketing (Intern)

2022

Unschool

- Identified and qualified prospective learners through outbound calls and messaging, contributing to lead generation efforts for the platform's course offerings.
- Assisted in executing digital marketing campaigns across social media and email channels, supporting increased visibility and engagement for course enrollments.
- Tracked and analyzed lead conversion data to identify drop-off points in the sales funnel, providing insights to improve outreach strategy.
- Collaborated with the sales team to refine pitch messaging and follow-up processes, contributing to a more consistent and effective enrollment conversion process.

Social Media Marketing (Intern)

2026

The Yellow Submarine

- Developed and executed social media content calendars for client brands, aligning post themes with each brand's identity and target audience.
- Conducted competitor and market research to inform content strategy, helping identify positioning gaps and content opportunities for client accounts.
- Created and refined brand messaging and visual content guidelines, ensuring consistency across client social media platforms.
- Compiled a comprehensive internship report analyzing campaign performance and social media strategy, translating insights into actionable recommendations for the agency's clients.

Social Media Analyst (Intern)

2026

The 4th Axis

- Monitored and analyzed social media performance metrics (engagement, reach, follower growth) across the brand's content, identifying trends among Bengali-speaking audiences.
- Conducted community engagement and digital outreach to strengthen audience interaction and brand presence on social platforms.
- Performed market research on regional digital media trends, providing strategic recommendations to improve content relevance and audience retention.
- Compiled analytics reports summarizing content performance, translating data into actionable insights that informed the brand's ongoing content strategy.

Brand:

To Whom It May Concern

We are pleased to recommend Mr. Indranil Majumder, who completed a four-week internship as a Social Media Analyst at The Media Content House for our brand The Fourth Axis. During his internship, he demonstrated strong analytical abilities, professionalism, and a keen interest in social media and digital marketing. He effectively assisted with monitoring social media performance, analysing engagement metrics, and providing valuable insights to support our marketing efforts.

Mr. Indranil Majumder was a quick learner, worked well with the team, and consistently approached tasks with dedication and attention to detail. We're confident that he will be a valuable asset in any future academic or professional endeavour and highly recommend him for relevant opportunities.

Best wishes.

Sincerely,

Subhro Sarvin

OTHERS

COMPETITIONS

Aakriti 2k25 — 1st Place Winner

Arihant Institute of Commerce and Management, Bengaluru

Investors Tank — Aakriti 2k25, Arihant Institute of Commerce and Management (Nov 2025) — First Place

- Competed in Investors Tank, an investment-pitch competition at Aakriti 2k25, presenting a structured investment case to a panel of judges as part of a 3 member team representing JAGSoM.
- Secured first place among participating teams from multiple institutions, demonstrating the ability to build and defend a compelling investment thesis under competitive, time-bound conditions.
- Contributed to structuring the investment narrative and articulating the case clearly to a judging panel — combining financial reasoning with persuasive communication.
- Represented JAGSoM at an external inter-collegiate platform, reflecting strong analytical and presentation skills valued in finance, consulting, and analytics-driven roles.

First Place — Investors Tank, Aakriti 2k25 (Arihant Institute of Commerce and Management, Bengaluru, 12–13 Nov 2025)

Won first place representing Jagdish Sheth School of Management in an investment-pitch competition at the inter-collegiate Aakriti 2k25 fest.

Kanyathon

Jagdish Sheth School of Management (JAGSoM), Race Management Department

- Volunteered for the student-driven annual charity run.

Certificate of Appreciation — Kanyathon 2026 (JAGSoM, IFIM Institutions & Vijaybhoomi University)
Recognized for dedication and hard work as a volunteer in the student-driven annual charity run, Kanyathon 2026.
